Experience, Expertise, Continuity

Higgins Analytical was founded in early 1994, but that is only half of the story. The two founders had already been packing commercial HPLC columns for more than fifteen years before that. Besides a lot of expertise, our experience brings an unrivaled continuity to the field.

Total Quality Approach to all Aspects of Design, Manufacturing and Testing

Each HPLC column and analytical cartridge from Higgins Analytical is evaluated by a computerized performance test prior to receiving a quality

control approval. This testing protocol involves a highly accurate statistical moments determination of the column's performance characteristics. These sensitive peak shape and column efficiency measurements can only be made by computerized data logging methods. The raw digital chromatogram for every column we have manufactured since March 1994 is retrievable from our archives.

Product Traceability

The test data for these serialized columns include sorbent properties and lot number as well as complete description of the test conditions. We are able to trace the serial number of every

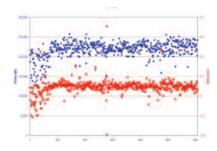

column to the customer that originally purchased the column.

Comprehensive Record Keeping and Statistical Quality Control

Raw digital test data is automatically archived for every column and analytical cartridge we manufacture. As a result, it is a simple matter for us to retrieve comprehensive quality control information and routinely apply it to our statistical process control activities. This

commitment to quality manufacturing and comprehensive record keeping permits us to produce replacement Certificates of Analysis when requested by laboratories complying with their internal GLP needs. And, most

importantly, we are able to assist customers during the lengthy process beginning with method development and optimization to validation and NDA filing by providing comprehensive serial number, manufacturing date, sorbent lot, and performance data for every column they ever purchased.

Expert Manufacturing and State-ofthe-Art Equipment

Two of Higgins Analytical's staff have been involved with the chemical separations business for over 30 years, others for only 10 or 15. By focusing this expertise exclusively on the separations consumables business, high quality products as well as high quality processes are assured. A key element of this expertise is the electronic manufacturing

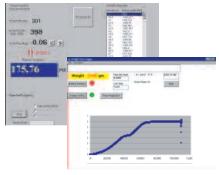

lab book that we have developed. All of our column packing equipment is controlled by this electronic book, and all methods are electronically stored. It is impossible to pack a column without the electronic lab book being completely documented. Processes cannot be

changed without an expert supervisor's intervention. When new processes for new products are developed or optimization is required for an existing method, a complete audit trail is created for every condition change that is made. The packing pumps operate with PID (proportional integral/derivative) controllers allowing for control flow rate,

rather than pressure, throughout the packing process. This is a very important point. Common folklore is that it takes high pressure to pack an HPLC column. Actually, pressure is only the result of a

complex two phase (liquid/solid) flow. This flow, not pressure, is what produces a packed bed. The "pressures" used by many column manufacturers are the result of flow rates that approach the velocities that will produce a "fluidized bed" during certain phases of the packing process, not exactly a condition that will produce a stable, optimally packed column. In addition to being able to control our equipment digitally, we are able to data log the actual conditions as well.

Our unique and highly automated column packing process is based on a closed, continuous flow system employing recoverable, unreactive, and safe fluids. And the best part about it is that it enables Higgins Analytical to manufacture a wide variety of HPLC columns with unrivaled efficiency.

Quality and Environmental Aspects of Process Solvents

Proper composition of slurry and packing solvents is vital to the whole process. Our solvent purification equipment and procedures allow us to address all of the solvent requirements for production and quality control. Not only does this investment permit us to use the highest purity solvents available, it also eliminates much of the expensive and environment-polluting solvent disposal practice characteristically found in today's chemical industry.

Unique Bonded Phase Synthesis

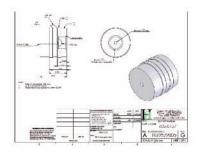

Chemists at Higgins Analytical have been producing bonded phases since 1979. During this long experience, we have pioneered many technologies long before they were "discovered" by others with a bigger marketing clout. Higgins Analytical's introduction of a "No

Requirement for TFA" HPLC column in early 1997 is just one example of our vanguard approach to this field.

Computer Aided Drawings and Numerical Control Machinery

Key to reinforcing our ability to provide the highest performance-to-price ratio products available in the separations consumables industry has been our investment in computer aided design (CAD) technology and computer numerically controlled (CNC) machinery. SolidWorks™ software is used by our engineers which permits us to design HPLC hardware and see it in its

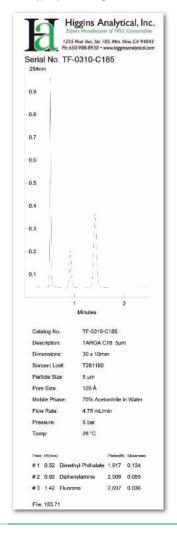

assembled 3D form before we manufacture it. Dedicated tooling and secure backups of machine code assure fast setups and consistant high quality production of all the stainless steel and plastic components in each product line.

Our product development, manufacturing, and testing processes strictly follow a systematic and well documented cycle.

A Certificate of Analysis, like the one below for a 3cm x 10mm cartridge, accompanies each HPLC Column and Cartridge we manufacture

Note: This high performance cartridge is typically used as a guard column.

Applications

HAISIL 100 columns and cartridges are very good general purpose columns that are particularly well suited for small mol ecules and peptide applications. The HAISIL 100 column and cartridge efficiencies are unrivaled yet they represent one of the most economical product lines in the market today. In formats ranging from 0.075 to 20mm ID and from 10 to 250mm in length,

100Å vs. 300Å Columns for Peptide Mapping

The question of whether to use a 100Å or 300Å column for mapping usually divides peptide chromatographers into two groups. Rather than take sides, we have chosen to offer very efficient columns with both pore diameters to suit both camp's preferences. HAISIL 100 and HAISIL 300 columns are avail able in 10 to 250mm lengths and 0.075mm to 20mm internal diameters.

Hormone Analogs

LH-RH (Luteinizing Hormone - Releasing Hormone) Analogs are used for the inhibition of gonadal steroid production. An important application area is in the treatment of prostate cancer.

Conditions

HAISIL 100 C18 5µm 150x4.6mm Solvent A: Phosphoric acid, ammonium sulfate aqueous buffer

Solvent B: Acetonitrile. Linear gradient at ImL/min 254nm detection

Analogs:

Alkaloids

A Peruvian vine named "Una de Gato" (Uncaria tomentosa) and commonly referred to as Cat's Claw, has become a popular natural product source for herbal remedies. Enthusiasts claim the oxindole alkaloid extracts to be effective in the treatment of a wide range of digestive and circulatory diseases as well as other afflictions ranging from cancer to arthritis. Reputable providers of such phytochemical containing formulations carefully assay the alkaloid content of the extracts and formulations. The chromatogram above illustrates baseline resolution of Cat's Claw bark extracts containing isopteropodine, pteropodine, mitraphylline, isomitraphylline, ryncophylline and isorynchophylline.

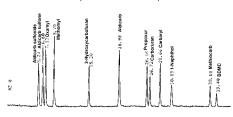

Alkaloids from Cat's Claw analyzed on a HAISIL 100 C18 column P/N HS-2546-M185

Economical Alternative for PICOTAG Analysis

Our HAISIL 100 C18 columns have demonstrated superior resolution and life time for PICOTAG™ amino acid analysis when compared to considerably more expensive columns from other manufacturers. Besides good linearity and column lifetime, the 150x4.6mm column yields very efficient amino acid analysis as shown in the chromatogram above (P/N HS-1546-M185).

HAISIL 100 - the Separations Work Horse

The 100Å pore size, monomeric bonded phase, and very high performance make HAISIL 100 an ideal choice for separations ranging from small molecules such as carbamate pesticides and pharmaceu-

Carbamate Pesticide Analysis 250 × 4.6mm HAISIL 100 C18

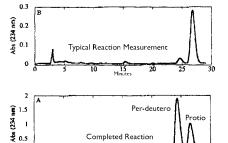

tical drugs to synthetic oligonucleotides and small peptides. High efficiency, symmetrical peaks, and long column life is characteristic not only of the C8 and C18 reverse phase columns, but the normal phase silica columns as well.

Kinetic Measurements in Disease Research

Researchers at the University of California, Santa Cruz have recently published a novel HPLC method that yields baseline separation of per-deuterated and protonated lipoxygenases.

The striking ability of a 250x4.6mm HAISIL 100 C18 column to resolve these two very similar compounds is enabling researchers to study large competitive kinetic isotope effects in Human 15-lipoxygenase catalysis. Protio/per-deutero ratio data obtained by this HPLC method agreed within experimental error of data obtained by ES-MS.

The elucidation of these mechanisms is noteworthy because of the increasing role human lipoxygenases are playing in inflammatory diseases and cancer growth regulation.

Fractionation of a Purified Tumor Cell Extract

Peptides ranging from 100 fmol to 1pmol are collected in 40sec intervals during a 70min gradient from 0 - 60% MeCN with HFBA modifier. A 40x2.1mm HAISIL 300 C18 5 μ m cartridge column (HK-0421-W185) is used.

Reanalysis of a Fraction from the Chromatogram above

The same 40x2.1mm HAISIL 300 cartridge is used for a 70min gradient from 0-60% MeCN with TFA modifier. Tic marks indicate 40sec fraction collections.

Applications

HAISIL 300 columns and cartridges are ideal for biomolecule separations such as peptides and small proteins. Optimized phase bonding and column packing techniques assure unsurpassed performance and column-to-column reproducibility. Short cartridge columns are economical and are ideally suited for LC/MS applications. The column and cartridge offering ranges from 150µm to 20mm I.D. which means that bioseparations can be optimized by selecting a format that best fits your analytical requirements.

Micro-Preparative HPLC

Higgins Analytical Cartridge Columns are helping researchers understand the immune response of living cells. An investigation to understand the genetic control of the immune response systems in organisms involves the extraction, isolation, and identification of more than 10,000 peptides. These distinct peptides are bound to a major histocompatibility complex (MHC) molecule on tumor cells.

Extraction of approximately 5×10^{10} cells yield several nanomoles of a very complex peptide mixture. Several rounds of RP HPLC with different organic modifiers on a 40x2.1mm PEEK cartridge column (HAISIL 300 C18 5 μ m, P/N: HK 0421 W185) are performed to fractionate the mixture into individual components.

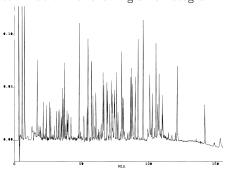

The chromatograms on the left illustrate how this technique is being used to nar row the search for the one peptide that marks a particular tumor cell as being diseased enabling it to be recognized by the immune cells.

Peek and Titanium cartridge columns used in the application described above. P/N: HK 0421 W185

Very High Peak Capacity

Depending upon the type of information a protein chemist is seeking, the HPLC analysis of a complex digest can take I to 2 hours. The following chromatogram

Tryptic Map of BSA on HAISIL 300 C18 5µm 250x4.6mm P/N HS-2546-W185

illustrates a high resolution tryptic digest map of BSA on a 250x2.1mm HAISIL 300 C18 5µm column indicates peak capacities in excess of 100. Small proteins, on the other hand can yield fewer fragments, and if only a "finger-print" of a digest is required, high peak capacity columns can be a waste of time.

Fast Analysis of a Complex Drug Delivery System

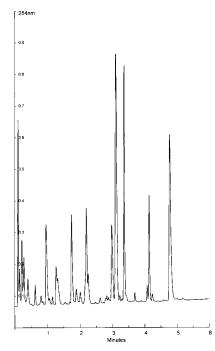

Most pharmaceutical QC laboratories are faced with rapidly increasing demands for high throughput capability. A good example of one laboratory's

approach to addressing a large number of samples for analysis on a daily basis is summarized below. This novel drug delivery system contains a small protein and other components that span an order of magnitude in molecular weight. All the compounds of interest were easily resolved in a single analysis with a fast linear gradient on a 5cm long HAISIL 300 C18 5µm column.

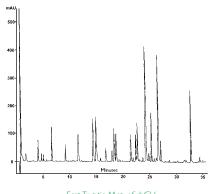

Peptide Map in 5 minutes

The figure below illustrates a very fast

peptide map of cytochrome-C.The information that can be gleaned from this five minute profile is more than adequate for many analytical requirements.The robust 50x4.6mm HAISIL 300 C18 column provides hundreds of runs without performance loss even under the aggressive 6ml/min flow conditions used in this example.

The cytochrome-C is a good example of pushing a column beyond its optimum operating conditions (more than six times optimum linear velocity) and still being able to get desired results. The same column can be run under more conventional conditions with a flatter gradient to optain even higher resolution separations. The rhGH tryptic map below was done on a 5cm long column that replaced the conventional 25cm column that was used initially.

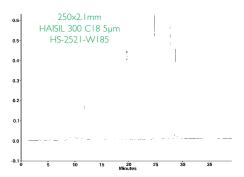

Fast Tryptic Map of rhGH 50x4.6mm HAISIL 300 C18

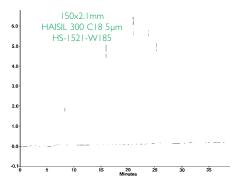

The Role of Column Length in Gradient Separations

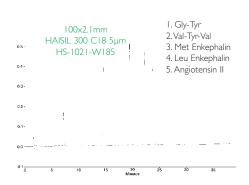

Changes in column length have a direct and linear effect on theoretical plates and analysis time in isocratic separations.

Column length plays a less important role, however, in gradient techniques. The three chromatograms below illustrate how well packed short HPLC columns yield very similar peptide separations under identical gradient conditions.

For this study, the $2.1\,\text{mm}$ I.D. HAISIL 300 C18 5 μm columns ranged from 250 to 100mm in length. While solvent and analysis time savings may be minimal, column cost savings can be significant when using as short a column as possible. Short columns also exhibit lower pressure at high flow rates.

A new "fast" cycle for high sensitivity Edman Sequencing

Abstract

Previously, we presented a complete 20 minute "fast" Edman chemistry cycle for the Applied Biosystems Protein Sequencer, HT series (49X HT). Here we describe a new "fast" cycle for the high sensitivity cLC series (49X cLC) instrument. The 35 min cycle includes a 20 min reversed phase capillary HPLC separation of the phenylthiohydantoin (PTH) amino acids. The normal cycle time of the 49x cLC was approx. 50 minutes; therefore approximately 10 hours were required to complete 10 residues of sequencing. With the new cycle, 10 residues of sequencing can be

completed in only 7.5 hours. Using this rapid cycle on the 492 or 4 cLC protein sequencer, 10 residues of sequencing on 2 different proteins can be automatically completed within a night.

In developing this rapid cycle, we have created new cartridge and flask cycles and sequencing methods. We are using a shorter C18 RP HPLC capillary column for the chromatography and have devel oped a new gradient. We will describe all the changes made to the standard system. We will also present protein and peptide sequencing results that were generated using this rapid cycle.

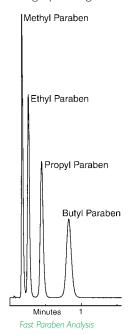

Poster 4P-52378th Annual Meeting of he Japanese Biochemical Society - Oct 2005 Y. Shionoya, D. Dupont, H. Hiranuma, S. Ando

Applications

HAISIL HL "high load" columns and cartridges are intended for applications requiring maximum loading and selectivity. The high surface area permits high bonded phase loading yet the monofunctional bonded phase and the absence of micro-pores eliminates the problems that plague many of the so-called "high capacity" columns currently on the market. The Type B silica backbone is pure, robust, and stable under harsh conditions. Users report satisfactory lifetime when used for prolong periods at pH as high as 9.

High Speed Analysis of Paraben **Food Preservatives**

Parabens represent another example of food additives that are routinely analyzed by HPLC. Often, the food matrix being assayed for preservative content requires exhaustive cleanup and pre-filtration in order to prevent clogging of columns with nonporous or 2µm sorbents recently suggested for this analysis. As in the previous diet cola example, the compounds of interest are base line resolved under isocratic conditions. The inexpensive HAISIL HL 5µm 20x2.1mm cartridge column and the 50 second analysis time contribute significantly towards reducing operating costs.

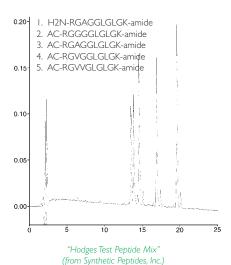

HAISIL HL C18 5µm 20x2.1mm Cartridge LK-0221-C185 700ul /min. 40% MeCN/water

HPLC Peptide Standards for RP on the HAISIL HL C18 Column

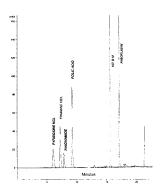

The aromatic hydrocarbons that most HPLC column manufacturers use to quality control columns render little information about a column's selectivity

HAISIL HL C18 5µm 150x4.6mm P/N LS-1546-C185

and performance characteristics for peptides. The Canadian corporation, SPI, produces a well characterized yet challenging peptide mixture that is very useful for quantifying HPLC column performance for peptides. The difficult to separate first pair of peptides are resolved to near base line on HAISIL HL C18 columns. Many so-called peptide analysis columns are unable to separate this pair.

Water Soluble Vitamin Analysis on HAISIL HL

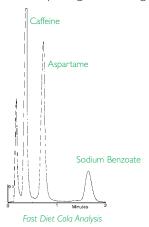

Water Soluble Vitamins

HAISIL HL C18 5µm 250x4.6mm A: 0.05mM KOAc, pH5; B: MeCN Gradient: 2.5% - 30%B in 25min

Food Additives

Beverage additive analysis is not only an important industrial application, but it also serves as a practical and relatively simple procedure for introductory HPLC courses. Industry is increasingly driven by rapid analysis requirements and an HPLC column can represent an overwhelming expense in a teaching environment. The diet cola analysis in the chromatogram to the left illustrates an extremely fast analysis on an extremely inexpensive HPLC column. A package containing five

HAISIL HL C18 5µm 2cm x 2.1mm Cartridge PN LK-0221-C185 15% MeCN/Water 200µL/min

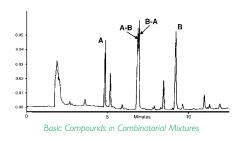

of the 20x2. Imm cartridge column used for this analysis costs about half as much as one moderately priced HPLC column. And, there's no need to pre-filter the cola sample through a 0.5 µm filter as some column manufacturers recommend when using their expensive columns packed with 2µm particles for this analysis! The readily available and nontoxic nature of the sample and the low cost of Higgins Analytical cartridges has made the diet cola analysis an ideal choice for classroom purposes.

Reverse Phase Chromatography of Basic Compounds in Combinatorial Mixtures

In the example at the top of the next column, A and B are single compounds containing two identical building blocks. A-B and B-A represent positional isomers, each containing two building blocks.

This analysis was conducted on the crude liquid-phase reaction mixture. Each component contains multiple secondary

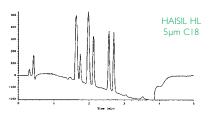

and tertiary amine functionality yet the combinatorial products can be rapidly chromatographed and exhibit no tailing on a 150x4.6mm HAISIL HL C18 column using a simple linear 5% to 100% MeCN/water 0.1% TFA gradient.

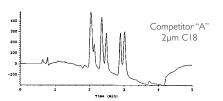

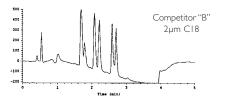

HAISIL HL C18 P/N 1S-1546-C185

Speed and Selectivity for Ballistic Gradients on Complex Libraries

The relative importance of particle size and selectivity are graphically illustrated below by the high speed analysis of a six component combinatorial library on a HAISIL HL C18 5µm column and two competitor's C18 2µm columns. HAISIL HL with its high carbon loading and surface area of often works much better than expensive small particle size columns that are prone to plugging up more quickly.

HEAVY Very Hydrophobic Loading

Relative hydrophobicity of Higgins Analytical's bonded phase sorbents.

Contitions: 70% MeCN/Water

Applications

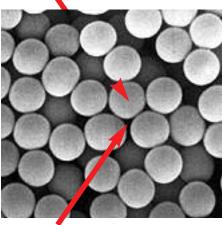

Keeping in mind that relative retention (α) is a much more powerful term than plates (N) in the expression for resolution in chromatography, choosing a column with different selectivity is almost always more helpful than just going to a smaller particle size when trying to improve a difficult separation. Our new HEAVY columns provide the highest retention of any column we manufacture.

Why do HPLC columns plug up?

A large percentage of HPLC columns die because the back pressure builds up to

5µm Silica Gel Particle

0.75µm Extra-Particle Flow Path

levels that exceed the instrument's practical limits. Most chromatographers (and many column manufacturers) believe this is because the inlet frit plugs up with particles. Actually, it is usually the packed-bed that becomes plugged by smaller than 1 µm particles that pass through in-line filters and the 2 µm inlet frits. The SEM above illustrates the relative sizes of particles and pores. Higgins Analytical offers a wide variety of guard cartridges that address this problem.

SPRITE is Designed to Operate in Either Flow Direction

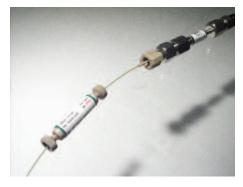

A SPRITE is made of PEEK and titanium and can be connected directly to a sample injection valve or directly to a mass spectrometer's source inlet.

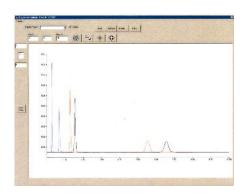

Using a PICCOLO as a Microbore Guard Column

PICCOLO columns are normally used as trap columns but since they are manufactured with the same techniques

we use to pack microbore HPLC columns, they are very efficient. Their performance makes them ideal for use as short microbore HPLC column or as a guard for placed in front of another analytical microbore column. The chromatograms in the figure below illustrate typical performance when used in these unconventional modes.

The Role of Column Length in Gradient Separations

Changes in column length have a direct and linear effect on theoretical plates and analysis time in isocratic separations. Column length plays a less important role, however, in gradient techniques. The three chromatograms below illustrate how well packed short HPLC columns yield very similar peptide separations under identical gradient conditions.

For this study, the 2.1mm I.D. HAISIL 300 C18 5µm columns ranged from 250 to 100mm in length. While solvent and analysis time savings may be minimal, column cost savings can be significant when using as short a column as possible. Short columns also exhibit lower pressure at high flow rates.

Comparison of Phosphopeptide Purity Analysis

Applications

300Å wide pore HPLC columns are traditionally used for biomolecule analysis since the molecular radii of large peptides and proteins are better matched than with smaller pore size columns (80 - 120Å) typically used for small molecule analysis. 300Å sorbents, however, have reduced surface area, thus less capacity and selectivity than would be had with smaller pore size materials. Higgins Analytical's new PROTO™ 200 presents a powerful alternative for the analysis of peptides of ~19kD and less.

Phosphopeptide Purity Analysis

Peptide HPLC column performance, using the same gradient conditions, was evaluated on the PROTO™ 200 C18, a new peptide analysis column obtained from The Nest Group, Inc., Against the industry standard, Grace/Vydac® 218TP C18, and their newer peptide chemistry, Everest® C18, the data show that the PROTO™ 200 C18 column has superior resolution to the 218TP chemistry and better resolution, especially for the more hydrophobic peptides, than the Everest® C18. In addition, the PROTO 200 columns can be run without TFA, which allows better detection when utilizing LC-MS.

Previously, the Everest chemistry had been shown by Grace/Vydac to be superior to all other wide pore columns, especially for the more hydrophobic peptides. However, the ready availability of the PROTO™ 200 peptide columns, in either C4 or C18 chemistries, and in capillary through preparative sizes, now allows researchers their first opportunity to save both time and money on a wider variety of applications, compared to the Grace/Vydac columns, and by extension to all other peptide columns.

Proto™ 200 C18 provides greater selectivity than the popular 300Å choice

Applications

Low pH operating conditions and high pH column washing steps are typical bioprocessing operating conditions that can severely limit the lifetime and performance of widepore columns typically used for protein and peptide analysis. Higgins Analytical's new PROTO300 has high capacity for enhanced resolution and is robust enough to withstand prolonged use at extreme pH (1.5 - 10).

Stability Study Under Extremely Alkaline Conditions

Experimental:

150 x 4.6mm columns were studied. All experiments were conducted on duplicate columns. Solutes used for performance measurement were dimethylphthalate and fluorene.

Step One:

Column stability and measurement precision was established for each column with multiple injections over 18hrs under neutral conditions (70% MeCN/water, ImL/min). All columns were very stable. The chromatograms of a column from each manufacturer at the end of the 18 hour period are shown on the left hand side.

Step Two:

Each column was flushed with 70% MeCN/0.5N NaOH solution at ImL/min for one hour (23°C). The columns were then purged and equilibrated under the standard neutral conditions then retested. The center chromatograms are the results of the first test after neutral equilibration

Step Three:

After the second step, the neutral test conditions were maintained for one hour and a repeat injection was made. The results are illustrated in the chromatograms on the right hand side of the figure.

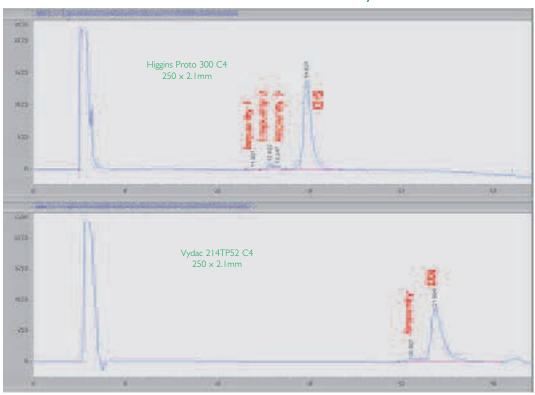

While Higgins Analytical does not recommend flushing any silica-based HPLC column under such aggressive conditions, these data show the superior akaline stability of Proto™ 300 C18.

Surface Area 430m²/gm %Carbon (w/w) C18 = 18%

Phase type Monofunctional & fully endcapped

Silica Class Type B

Phalanx is uniquely suitable for the efficient analysis of both acidic and basic analytes. In addition, its high capacity, good stability at high pH, and fast equilibration at extreme ranges of hydrophobicity make Phalanx a powerful option for challenging separation problems.

Applications

Phalanx is Higgins Analytical's latest addition to a family of unique high performance HPLC sorbents. The novel end capping technology of this new sorbent is a continuation of the pioneering approach taken in 1996 when we introduced Targa[®], the first HPLC sorbent specifically designed for efficient LC-MS applications without TFA.

Based on an ultrapure, Type-B silica backbone, Phalanx has a relatively high surface area of 430 m²/gm, but its very tight pore size distribution eliminates the undesirable side effects of micropores that often plague other high surface materials.

Optimum for Basic and Acidic compounds: Many modern HPLC sorbents employ embedded polar functionality. While these secondary structures can provide unique selectivity and eliminate undesirable solute/sorbent interaction, they often compromise the useful range of solutes or buffers that can be used. The figure on the left and those on page 2 illustrate that Phalanx columns produce symmetrical peaks during the analysis of basic, neutral, and acidic compounds.

Wide pH operating range: The unique endcapping reduces acid/base hydrolysis of the bonded phase and greatly reduces silica solvation at high pH.

Guide to Phalanx Part Number

Px-xxxx-C185 Phalanx C18 5µm See Page 23 for complete Part Number information

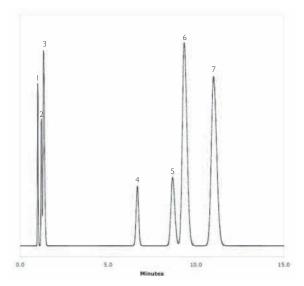

Phalanx HPLC columns and cartridges facilitate the development of robust assays for challenging analytes

Unique Features:

- Ideal for Basic and Acidic Analytes
- Wide pH Range Stability
- High Capacity
- No secondary Si OH interaction
- No metal contamination
- Extreme hydrophobicity range

Standard Sizes:

- Special products for LC MS
- 0.075 20mm I.D. range
- Wide range of HPLC Cartridge and Column types
- PEEK/titanium as well as stainless steel formats

Peptide Mapping without TFA

The following chromatograms illustrate the differences in selectivity for peptide maps of cytochrome-C when using

0.05% TFA or 0.05% acetic acid buffer in

Tryptic digest of Cytochrome C Gradient 5/95-35/65 ACN/H20 in 30 min 1% per min 0.05% TFA pH=2.2 0.0050 0.0040 0.0030 0.0020 0.0010

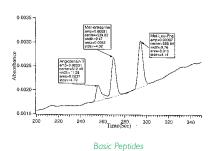

1%/min acetonitrile gradient on a short 50×1.0mm TARGA C18 column. Both dilute buffer examples are characterized by sharp peaks and no tailing.

LC-MS without TFA

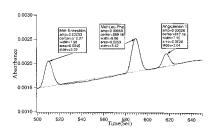

Researchers have shown that Higgins Analytical's TARGA C8 and C18 phases have an extremely well protected silanol surface. An acetonitrile/water 1%/min gradients with as little as 0.05% acetic acid gives a very satisfactory peptide map on a short 5cm x Imm TARGA C18 column. The ability to buffer with acetic or formic acid rather than TFA greatly enhances signals for LC/MS techniques.

While TARGA columns give exceptional performance without TFA buffer, it does not mean that you are precluded from using it. In fact, the changes in selectivity

with 0.1% Acetic Acid pH 3.1 TARGA C18 5µm 50x1.0mm

that comes with changing buffer acids can be a powerful tool for separation optimization. Notice how the peptide elution orders change between the acetic acid (above) and TFA (below) buffered chromatogram. This is due to the diferences in pH of the acetic acid and TFA mobile phase.

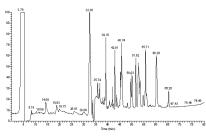

Basic Peptides

with 0.1% TFA pH 2.2 TARGA C18 5µm 50×1.0mm

Applications

TARGA columns and cartridges are ideal for applications requiring an absence of secondary solute-silanol interaction. Basic and acidic drugs and peptides can be chromatographed efficiently with little or no buffer. Targa columns are particularly well suited for LC/MS applications where acetic acid or formic acid can be substituted for TFA resulting in significant increase in signal. While TFA is not required, it does not preclude its use on TARGA columns. TARGA exhibits extremely fast equilibration kinetics from high to low organic phase compositions. It works well in 100% aqueous conditions for hydrophilic applications also.

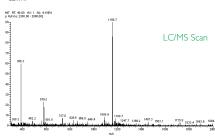

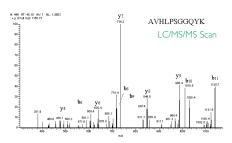

Tryptic Map of Human Ocular Lens Proteins beta A1 crystallin and gamma S crystallin

TARGA C18 5µm 150x0.5mm P/NTS-15M5-C185

Solvent A: 0.1% Acetic Acid Solvent B: 0.1% Acetic Acid 65% MeCN 0 - 50% B in 60min, 50 - 100%B in 15min

Sample is a tryptic digest of a 2D electrophoresis separated spot digested from PDVF membrane. The two ocular proteins are ~25kD. The LC/MS zoom scan below confirms the peak at 39.15min is singly charged, and software interpretation of the MS/MS scan at the bottom confirms the 1156.6 ion as residues 84-94 in human gamma S crystallin.

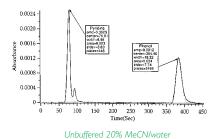

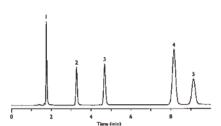

Unrivaled End Capping Technology Efforts to eliminate solute-silanol

Targa HPLC columns are true to the Latin root of their name. TARGA, meaning "shield," is precisely the effect the unique bonded phase has on the silica's silanol surface.

Many HPLC column manufacturers illustrate the performance of their columns packed with inert, base deactivated, "Type B silica" bonded phases by the chromatographic behavior of polar compounds such as pyridine. Performance claims can be misleading, however, when mobile phases are buffered to low pH or when they contain high percentages of organic solvent.

Favorable Kinetics at Aqueous or Organic Mobile Phase Extremes

The bulky moiety used for end capping TARGA C8 and C18 sorbents present other valuable selectivity characteristics in addition to the extreme inertness to basic and acidic compounds. Long chain alkane bonded phases collapse under low organic phase conditions on most reverse phase HPLC columns causing poor reproducibility and slow reequilibration. Fast gradients can be run on TARGA columns from initial 100% aqueous conditions with fast cycle times and very good run-to-run reproducibility. TARGA columns can also be run isocratically in 100% aqueous conditions for carbohydrate analysis, or with only a few percent organic modifier to achieve selectivity on solutes that are retained under typical reverse phase conditions.

TARGA's Superior Hydrophilic Reverse Phase Properties

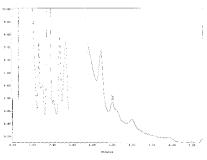

Several manufacturers offer reverse phase column products with imbedded polar functionality intended to enhance the chromatography of hydrophilic compounds like those illustrated in the previous antibacterial example. Unfortunately, most of these approaches introduce undesirable secondary effects that preclude their use with acidic or basic solutes unlike TARGA with its unique bonded phase.

TARGA Compared to a Competitor's Hydophilic Column 150x4.6mm, 20% MeCN/water (unbuffered) ImL/min

Trace Catecholamine Analysis

In vivo microdialysis present a challenge to both instrumentation and column design, especially when depended upon as a tool for routine analysis. The chromatogram below illustrates rat hypothalamus microdialysis analysis for 5HT. Researchers report that the 100x2.1mm Higgins Analytical PEEK and titanium TARGA C18 column operates routinely at 0.2 - 100 nM detection levels.

We Manufacture Products with Internal Diameters Ranging Almost Three Orders of Magnitude

This catalog contains over one thousand products manufactured with over fifteen different phases in an unequaled variety of formats. This generous offering makes it easy to choose the proper column for your application.

The columns and cartridges included in this version of the Higgins Analytical catalog have internal diameters ranging from 75 μ m to 20mm. Not listed are our 30mm and 50mm i.d. prep-columns. The bulk of our business in these large formats is based on Proto 200 and Proto 300 C4 and C18 products on particle sizes ranging from 10 μ m to 50 μ m geared for biomolecule purification - especially synthetic peptides.

As outlined in the paragraph below, another service we provide is custom manufacturing for columns of all sizes, 30mm and 50mm prep-columns included, with sorbents produced by manufacturers other than ourselves. So, if you are interested in one of our many sorbents, or another material that you may prefer, please give us a call to discuss the details.

UNEQUALED FLEXIBILITY

Custom Manufacturing Service

Besides being known worldwide for our huge variety of high quality and uncompromisingly affordable Higgins Analytical products, custom labeled manufacturing represents a sizeable part of our business. In fact, a lot of people might be very surprised if they learned that their favorite competitive column was actually packed by Higgins Analytical. In addition to being based on our own unique sorbents, many of the products we manufacture are produced with our customers' own proprietary media. So, if your com pany feels it might want to add a selection of high quality HPLC columns to its product offering, or if you need large numbers of a particular column or device for your internal analytical needs, please give us a call. Higgins Analytical is very expert at providing this type of service.

If you can put it in a bottle, Higgins Analytical will pack it into a column.

If we're unsuccessful, it won't cost a thing!

HPLC Columns and Cartridges

Higgins Analytical HPLC column product part numbers are based on a 2-4-4 character pattern. For example:

TS-1521-C185

is the part number for a conventional 15cm x 2.1mm stainless steel column packed with Targa C18 5µm sorbent.

The two character prefix indicates sorbent and hardware type.

> Prefix Character I (Sorbent) X-XXXX-XXXX

C = CLIPEUS

H = HAISIL 100 or HAISIL 300

L = HAISILHLP = PHALANX

R = PROTO 200 or 300

T = TARGAV = HEAVY

Prefix Character 2 (Hardware) **X■-XXXX-XXX**

FS = Capellini 6-32 column

PS = Capellini 10-32 column

S = Stainless steel HPLC Column

P = PEEK HPLC column

F = Stainless steel cartridge column

K = PEEK cartridge column

R = Sprite Direct-Connect column

Note: Microbore columns have the second character. S. like stainless steel columns, but they are glass lined.

The four center characters indicate the column or cartridge length (cm) and internal diameter (mm).

Center Characters I and 2 (Length) $XX-\blacksquare\blacksquare XX-XXX$

03 = 3cm

04 = 4 cm

05 = 5 cm

07 = 7.5 cm

10 = 10 cm

12 = 12.5 cm

15 = 15 cm

20 = 20 cm

22 = 22cm

25 = 25 cm30 = 30 cm

50 = 50 cm

The four center characters indicate the column or cartridge length (cm) and internal diameter (mm).

> Center Characters 3 and 4 (I.D.) XX-XX

07 = 0.075mm

MI = 0.1mm

15 = 0.15mm

M3 = 0.3 mm

M5 = 0.5 mm

M8 = 0.8 mm

01 = 1.0 mm

21 = 2.1 mm

30 = 3.0mm

32 = 3.2mm

39 = 3.9 mm

40 = 4.0 mm46 = 4.6mm

10 = 10 mm

20 = 20 mm

The four character suffix indicates sorbent chemistry and particle size.

> Suffix Characters I to 3 (Phase) XX-XXXX-**•••**

C04 = Butyl or C4

C08 = Octyl or C8

C18 = ODS or C18

CNP = Cyano or Nitrile

D04 = 200 Å C4

D18 = 200Å C18

M08 = HAISIL 100 C8

M18 = HAISIL 100 C18

NH2 = Amino

PHN = Phenyl

SIL = Silica Gel

W04 = 300 Å C4

W08 = 300 Å C8

W18 = 300Å C18

Suffix Character 4 (Particle Size) XX-XXXX-XXX**■**

 $I = 10 \mu m$

 $2 = 10 - 15 \mu m$

3 = 3 or 3.5 um

 $5 = 4 - 5 \mu m$

 $7 = 15 - 20 \mu m$

Notes:

(1) Standard configurations are highlighted.

(2) Polymeric phases have a 3-4-6 pattern. The first two prefix charactes are PL. The last character denotes particle size.

xP-xx46-xxxx	4.6mm PEEK I.D.	Popular standard I.D.

See Page 23 for complete Part Number information

Widest Range of Hardware Types and Sizes Available Anywhere

Higgins Analytical manufacturers the widest range of column formats in the widest range of hardware types available anywhere. Conventional HPLC columns are offered in stainless steel hardware. Frit materials include stainless steel, Carpenter C, titanium. Standard lengths range from 3.3cm to 25 cm. Custom columns are routinely manufactured in odd length ranging from 3.3 to 50cm. The internal diameters of our entire HPLC column and cartridge offering range from 75 µm to 20 mm, over two orders of magnitude.

Comparison of PHALANX to Kromasil C18 for a Pharmaceutical Drug Analysis 150 X 4.6mm Columns, ImL/min Linear Gradient for 50 minutes

Higgins Analytical thanks Amos Heckendorf of The Nest Group (www.nestgrp.com) for these data.

See pages 62 - 63 for information on the wide variety of Guard Cartridges available for these Analytical Columns

Microbore HPLC Columns

Wide Range of 1mm, 0.8mm, 0.5mm, and 0.3mm Columns

Guide to MICROBORE Part Numbers

xS-xx01-xxxx
I.0mm Microbore
xS-xxM8-xxxx
0.8mm Microbore
xS-xxM5-xxxx
0.5mm Microbore
xS-xxM3-xxxx
0.3mm Microbore

See Page 23 for complete Part Number information

Widest Range of Microbore column sizes with a wide range of sorbents

Higgins Analytical manufacturers the widest range of Microbore column formats available anywhere. In addition to the glass-lined columns ranging from 300µm to 1mm I.D., we also porvide unique PEEK/Titanium microbore columns for specialized applications (see Piccolo).

Microbore HPLC Columns (continued)

Wide Range of Imm, 0.5mm, and 0.3mm Columns

Higgins Analytical manufacturers the widest range of Microbore HPLC Columns in the world.

Comparison of a Higgins to Another Manufacturer's Imm Column

Tryptic Digest of Carbamidomethylated BSA (see page 15 for details)

Semi-Prep and Prep Columns

Wide Range of 10mm and 20mm i.d. columns

Semi-Prep (10mm) and Prep (20mm) Columns

Not only does Higgins Analytical manufacturer semi-prep and prep columns with our most popular phases, we also produce guard cartridges for these columns.

See pages 56 - 57 (10mm) and 60 - 61 (20mm) for more information about guard cartridges, and pages 62 - 63 for cartridge holders.

Guide to Semi-Prep and Prep Column Part Numbers

xS-xx10-xxxx 10mm I.D. columns xS-xx20-xxxx 20mm I.D. columns

See Page 23 for complete Part Number information

See pages 66 - 67 for information about the Prep and Semi-Prep Cartridge Holders

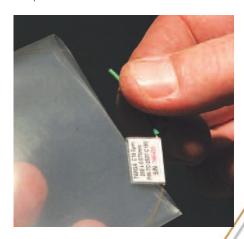

Caπllary™ CAPILLARY HPLC COLUMNS

A New Benchmark in Capillary Column Quality and Cost:

Higgins Analytical's unique approach provides a flexible format and reasonably priced capillary HPLC column for LC-MS applications. Ca π llary, π , columns are all manufactured and tested as 250mm products and are offered for the reasonable price of \$314.16 for both 75 μ m and 150 μ m versions.

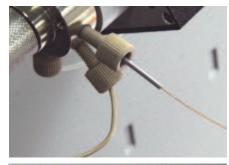

Cutting and trimming a Caπllary™ Colum

The Ca π llaries can be used as is, or they can be easily cut to any required length, with a ceramic cutter that is included with each column. Caπllary™ columns are nominally 25cm in length. Unless the capillary is going to be used in its full length, the white ceramic cutter is used to cut the column to the required size. Measure from the frit in the center of the green section. This technique can also be useful for removing a short section from the column inlet if it becomes contaminated or plugged. Similarly, the column outlet can be trimmed to a proper length before attaching it to the post-column device.

Plumbing Considerations:

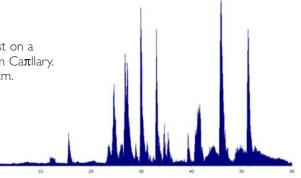

The Caπllary™ 75 and Caπllary™ 150 columns have standard 360μm outer diameters which can be conveniently plumbed to HPLC systems in a wide variety of manners. The optional Higgins Micro Column Connection Kit (PIN MIC-KIT, see page 74) includes sleeves and fingertight bushings to facilitate capillary column attachment to most injection valves, detectors, and MS source inlets.

Robust design with High Performance:

To the right, aBSA tryptic digest on a 150cm \times 75 μm Targa C18 5 μm Ca π llary. P/NTC-2507-C185 cut to 15cm.

CAPELLINI 6-32

CAPILLARY HPLC COLUMNS with 6-32 Thread PEEK/Ti Fittings

Capillary HPLC Columns

Unique Features:

- 6-32 threads for capillary fittings
- PEEK/Titanium fittings
- Tested and supplied with CofA
- High performance
- Higgins Analytical Sorbents

Applications:

- LC-MS
- Microbore HPLC

Standard Sizes:

- 50 to 150×0.150 mm
- 50 to 150×0.075 mm
- · Longer and shorter lengths available

Guide to CAPELLINI Part Numbers

xFS-xx07-xxxx 75µm CAPELLINI 6-32 xFS-xx15-xxxx 150µm CAPELLINI 6-32 See Page 23 for complete Part Number information Higgins Analytical Capellini are robust, high performance capillary HPLC columns for LC-MS and other very small scale applications. The inert PEEK and titanium fittings complement the Higgins Analytical sorbents such as TARGA which was developed to enable LC-MS applications without TFA.

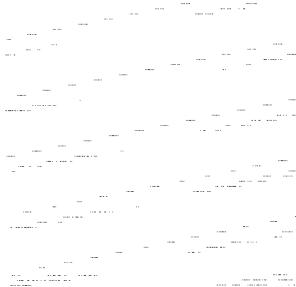

Our no nonsense testing procedure does not resort to sample and flow splitting techniques, inaccurate k' values, and miniscule chromatograms, as do some manufacturers, to illustrate column performance. The CofA's symmetrical peaks and the high resolution map speak for themselves.

Capellini - Back by Popular Demand

When Higgins Analytical introduced $Ca\pi$ llary columns three years ago, we removed Capellini from our catalog, however, we contnued to manufacture this design for customers that had been using it for several years. Somewhat to our surprise, Capellini sales have continued to grow and we still receive numerous product inquiries in spite of their absence from our literature. While Caπllary columns are very efficient and cost effective (see page 40), we have found that many chromatographers prefer the symmetrical, flow reversable design and the 6-32 threaded end-fittings of Capellini. Even though Capellini are more expensive to manufacture and somewhat less efficient than Caπllary columns, due to the end fitting design, they enjoy a wide variety of uses that involve flow reversal, such trap applications.

High Selectivity:

A partial $1.5\mu L/min\ LCMSMS$ map of a BSA tryptic digest.

CAPELLINI 10-32

CAPILLARY HPLC COLUMNS with 10-32 Thread s.s. Fittings

Capillary HPLC Columns

Unique Features:

- 10-32 threads for standard fittings
- s.s. End Fittings/Titanium Frits
- Tested and supplied with CofA
- High performance
- Higgins Analytical Sorbents

Applications:

- LC-MS
- Microbore HPLC

Standard Sizes:

- 50 to 150×0.150 mm
- 50 to 150×0.075 mm
- Longer and shorter lengths available

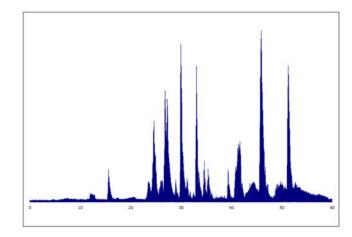

Higgins Analytical Capellini have been popular with chromatographers requiring an easy-to-use and robust capillary HPLC column. The original Capellini (now called Capellini 6-32) were available only with 6-32 fittings. Now, we have another version for chromatographers prefering 10-32 thread fittings - Capellini 10-32. Another difference between the two versions of Capellini is that the 10-32 threads are stainless steel rather than PEEK. Both types are made with titanium frits on each end, providing inertness and flow direction reversability.

Guide to CAPELLINI 10-32 Part Numbers

xPS-xx07-xxxx 75µm CAPELLINI 10-32 xPS-xx15-xxxx 150µm CAPELLINI 10-32 See Page 23 for complete Part Number information

Robust design with High Performance:

SPRITE

DIRECT CONNECT HPLC COLUMN

Guide to SPRITE Part Numbers

xR-0121-xxxx $10 \times 2.1mm$ Sprite xR-0221-xxxx $20 \times 2.1mm$ Sprite xR-0421-xxxx $40 \times 2.1mm$ Sprite

See Page 23 for complete Part Number information

The Sprite family of narrowbore HPLC columns is a unique high performance product for LC-MS and other high-speed, small volume applications. All three sizes of 2.1 mm I.D Sprite HPLC columns are individually tested. A Certificate of Analysis accompanies each column. The Sprite's certificate includes the original chromatogram and comprehensive testing and sorbent documentation.

The inert PEEK and titanium design has been proven to be structurally sound to over 5,000 PSI (340Bar).

The optional Higgins Micro Column Connection Kit (PIN MIC-KIT, see page 69) includes sleeves and finger-tight bushings to facilitate the attachment of a Sprite to most injection valves, detectors, and MS source inlets.

SPRITE is Designed to Operate in Either Flow Direction

A SPRITE is made of PEEK and titanium and can be connected directly to a sample injection valve or directly to a mass spectrometer's source inlet.

PICCOLO

SHORT MICROBORE TRAPS AND COLUMNS

Guide to PICCOLO Part Numbers

 The Piccolo family of microbore HPLC columns is a unique high performance product for LC-MS and other high-speed, small volume applications. These efficient columns are the only products of their type that are individually tested. A Certificate of Analysis accompanies each column.

In addition to analytical microbore applications Piccolo columns are ideal guards for protecting longer microbore HPLC columns.

Piccolo column void volumes range from approximately 5µl to 300nL, making them perfect for a wide variety of trapping, desalting, and trace enrichment applications. These small columns can be conveniently used with micro injection and switching valves as pictured on the left.

The optional Higgins Micro Column Connection Kit (PIN MIC-KIT, see page 69) includes sleeves and finger-tight bushings to facilitate the attachment of a Piccolo's 6-32 threads to most injection valves, detectors, and MS source inlets.

HAICART CARTRIDGES

STAINLESS STEEL CARTRIDGE COLUMNS

Guide to HAICART Analytical Cartridge Part Numbers

See Page 23 for complete Part Number information

The HAICART family of HPLC cartridge columns provides a convenient and economical approach to guard column, trace enrichment, and fast analysis applications. These stainless steel cartridges are available with 3.2mm and 4.6mm internal diameters and with 2, 4, 5, or 10cm lengths. This wide selection makes it possible to address numerous analytical needs.

See pages 66 - 67 for information about the cartridge holders required for Higgins Analytical's HAICART Cartridge Columns. HAICART cartridges are also compatible with PE/Brownlee MPLC cartridge holders.

PEEK and Titanium Cartridges

The HAIPEEK family of narrowbore HPLC cartridge columns is a unique high performance product for LC-MS and other high-speed, small volume applications. The 40 and 50mm sizes of 2.1mm I.D HAIPEEK HPLC Cartridges are individually tested. A Certificate of Analysis, which includes the original chromatogram and comprehensive testing and sorbent documentation, accompanies each column. The 20mm \times 2.1mm cartridges excel as narrowbore guard columns, yet even though they are not individually tested, the majority are routinely used as very economical and efficient columns for high speed HPLC screening and LC-MS applications. See pages 66 - 67 for information about the cartridge holders required for Higgins Analytical's HAIPEEK Cartridge Columns. HAIPEEK cartridges are also compatible with PE/Brownlee MPLC cartridge holders.

HAISpeed IO - A high performance IOmm I.D. Cartridge System

High throughput requirements for combinatorial chemistry applications often call for 10mm I.D. columns. Higgins Analytical has developed a convenient cartridge system that offers an economical solution for demanding combinatorial and semi-preprative needs. Even though a HAISpeed I 0 cartridge costs a fraction of conventional 10mm HPLC column of the same length, they have the same consistently high performance of other Higgins Analytical columns.

Each 5cm and 10cm cartridge column is tested and is shipped with a CofA.

HAIPEEK & HAICART Guards

PEEK/TITANIUM and s.s. Guard Cartridges

Guide to HAIPEEK and HAICART Guard Cartridge Part Numbers

xK-0221-xxxx 20 x 2.1 mm PEEK/titanium guard cartridge xF-0232-xxxx 20 x 3.2mm stainless steel guard cartridge

See Page 23 for complete Part Number information

Note: Old HAICART P/Ns such as H118, T118, C1PH, etc. can still be used when ordering.

Analytical Guard Cartridges

The complete range of sorbents manufactured by Higgins Analytical is available in $2cm \times 2.1$ or 3.2mm I.D. guard cartridges. Not only does this provide a wide selection of products for protecting analytical and narrowbore HPLC columns, it also facilitates a wide variety of trace enrichment, column switching, and ballistic gradient applica-

These 2cm long cartridges require a reusable holder and are compatible with Higgins Analytical's HAIPEEK Guard Holders as well as PE/Brownlee's NewGuard Holder.

HAISpeed20 CARTRIDGES

20mm I.D. Prep Guard Cartridge Columns

Guide to HAISpeed 20 Cartridge Part Numbers

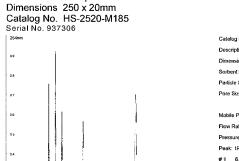

xF-0220-xxxx 25 x 20mm cartridge See Page 23 for complete Part Number information

HAISpeed20 guard cartridges provide unique Protection for 20mm I.D. prep columns.

"Prep is a dirty business," and expensive columns can be quickly destroyed by crude samples if proper precautions are not taken. Higgins Analytical's HAISpeed20 Prep Guard System provides effective column protection without compromising performance. In addition to an efficiently packed bed which retains strongly absorbing junk that would change the selectivity of the prep column, these unique guard cartridges have 0.5 µm frits that remove particulate contaminants as well.

HAISpeed20 guard cartridges provide convenience and performance

Cartridge Holders

Holders for 2.1, 3.2, 4.6, 10, and 20mm I.D. Cartridges

No Tools Required for Leak-Free Operation

Even though Higgins Analytical cartridge holders do not require any tools for assembly and disassembly, their leak-free operation assures that maximum performance will be achieved in your demanding, high-speed separations.

The Holder's light weight also makes it easy to handle and assures its compatibility in challenging plumbing situations.

HAIFILTER

"We found the HAIFILTER to be an ideal solution for our high performance in-line filtration needs, and it doesn't require any tools or wrenches!"

- Inert construction's threads won't oxidize or gall

REINTRODUCED! Even though HAIFILTER Was removed from our catalog several years ago, it continues to be so popular with our old customers, • Direct column connection and symmetrical versions

• No tools required • Leak free operation

• 0.5 µm filters

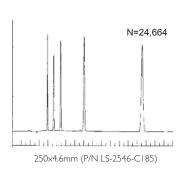

A simple, yet effective, means of protection is to place a filter in the flow path between the sample injection valve and the HPLC column. While this technique is commonly used, it is also commonly plagued by leaky holders and significant performance loss. The Higgins Analytical HAIFILTER resolves all of these problems!

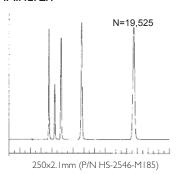

Simplicity and Convenience

The Higgins Analytical HAIFILTER provides efficient and leak-free in-line filtration, yet it does not require any tools. To make it even more convenient, the HAIFILTER is designed to connect directly to the inlet fitting on the HPLC column,

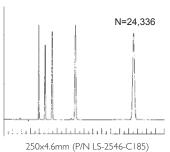

maximizing per- formance, and minimizing hardware. The 0.5 µm porosity frits will remove much of the particulate contami nation that is largely responsible for column pressure build up and plugging. The holder's inert construction, and the availability of PEEK and titanium as well as stainless steel frits, insures that the HAIFILTER can address all of your in-line filtration needs.

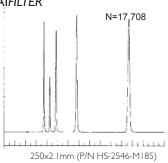

HPLC Columns without a HAIFILTER

HPLC Columns with a HAIFILTER

Performance

Try the experiment summarized by the chromatograms above with another man ufacturer's in-line filter. You may be very surprised how much more other inline filters contribute to peak broadening when comparison to the miniscule $28\mu L^2$ at 200µL/min volume-variance that is

obtained with the HAIFILTER. This exceptional efficiency is confirmed by chromatographers reporting that using a HAIFILTER permits the routine analysis of solid-phase sample extracts by LC/MS with good efficiency and greatly enhanced HPLC column life.

Two Convenient Formats

HAIFILTER is now available in two formats. The leak-free, finger-tight, and efficient performance are qualities of the HAIFILTER that have made it a popular product, replacing the competition's awkward and leaky alternatives in hundreds of laboratories worldwide. The direct connect feature in the original design makes the HAIFILTER FM ideal for pro tecting HPLC columns while the symmetrical female thread fittings on each end of HAIFILTER FF provide unequaled flexibility to address your HPLC system's filtration requirements.

HAIFILTER Holders and Replacement Filters

HAIFILTER FM (Female/Male) Starter Kits

HF-FKITHAIFILTER FM (Standard)\$270HF-WKITHAIFILTER FM (for Waters HPLC columns)\$270HF-RKITHAIFILTER FM (for Rheodyne injection valves -\$270

Specify valve model when ordering)

Note: HAIFILTER FM Starter Kits include a package of 10 filters (HF-SFILT), a 10cm piece of PEEK tubing, and a Delrin bushing and a PEEK ferrule.

HAIFILTER FF (Female/Female) Starter Kit

FF-FKIT HAIFILTER FF \$270

Note: The HAIFILTER FF Starter Kit includes a package of 10 filters (HF-SFILT), two 10cm pieces of PEEK tubing, and two Delrin bushings and two PEEK ferrules.

Replacement Filters

All replacement kits contain 10 filters per package

HF-SFILT	Stainless steel HAIFILTER replacement filters	pkg of 10	\$85
HF-TFILT	Titanium HAIFILTER replacements filters	pkg of 10	\$140
HF-PFILT	PEEK HAIFILTER replacements filters	pkg of 10	\$160

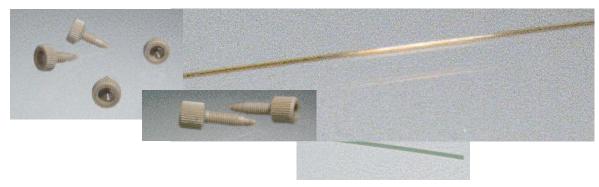

FILTER replacement is easy and requires no tools

Flexibility

Not only is the HAIFILTER available in two formats, it can also be directly connected to a sample injection or switching valve. The photograph to the right demon strates how the HAIFILTER has been designed to clear the bushings on a popular Rheodyne sample injection valve.

PARTS AND ACCESSORIES

Micro Column Connector Kit

Kit facilitates plumbing a Piccolo, Sprite, Capellini 6-32, or a $Ca\pi$ llary to your instrument

MIC-KIT \$100
Kit Contains:

6-32 PEEK Bushings (4 each)

10-32 PEEK Long Bushings (2 each) Green Sleeve 0.155 x 0.025" (4 each) Brown Sleeve 0.062 x 0.015" (2 each)

Fused Silica Capillaries 10cm x 150µm (4 each)

Expert and Responsive Technical Support

As a Higgins Analytical Customer seeking technical support or product information, you will eliminate long waits and expensive phone calls, and you will never be transferred from one person to another only to end up in someone's phone mail! By simply faxing (1-650-988-8931) or e-mailing (hplc@higanalyt.com) your question to our Technical Support Group, you will receive a prompt written response. If we don't know the answer, we will tell you so - but, that doesn't happen very often. Additional up-to-date product and application information can be found by pointing your browser at our web site. www.higanalyt.com

Easy Ordering and Rapid Delivery

Our worldwide network of qualified distributors can provide expert support and prompt delivery from their local inventory. Our catalog-listed items are generally shipped from the factory within a day of receiving the order. In the event that we have not provided you with a near by distributor, we can ship an order to you directly from the factory by a variety of carriers.

In order to further simplify the process for you and your purchasing department,

Higgins Analytical and many of its distributors accept credit card orders. Payment terms for all other orders are net 30 days from date of invoice.

Product Availability

Higgins Analytical products are available worldwide through a network of responsive distributors. These organizations can provide qualified technical support and prompt product delivery. The names can be found by sending us a fax (650-988-8931) or by checking our web site which, in addition to names, addresses and phone numbers, contains many hyperlinked email and URL addresses.

HIGGINS ANALYTICAL PRODUCTS
MAY BE PURCHASED AND ARE SOLD
ONLY ON THE FOLLOWING WARRANTY TERMS AND CONDITIONS. ADDITIONAL OR DIFFERENT TERMS,
WHETHER IN AN ORDER, ACKNOWLEDGMENT, INVOICE OR OTHER DOCUMENT, SHALL NOT BECOME PART OF
OR VARY THE FOLLOWING TERMS
UNLESS AGREED TO IN WRITING BY
HIGGINS ANALYTICAL

LIMITED WARRANTY

Higgins Analytical products are manufactured and quality controlled to the highest industry standards, and Higgins Analytical warrants that the products, when properly applied in accordance with Higgins Analytical's standards therefor, will perform for a period of thirty (30) days after delivery substantially as described in Higgins Analytical's then current specifications for the product. If a customer believes a product does not comply with such warranty, the customer shall, within the warranty period, report the purported defect to Higgins Analytical and cooperate fully with Higgins Analytical in determining the conditions and cause of any purported defect and, thereby, obtain a returned goods authorization from Higgins Analytical or the place of purchase. If Higgins Analytical determines the alleged defect occurred as a result of misuse, neglect, improper installation, repair, alteration, application or accident, rapid depressurization, removal of column end fittings, unusual physical or electrical stress or improper handling procedure, the warranty shall be void and ineffective.

EXPRESS LIMITATIONS

HIGGINS ANALYTICAL PRODUCTS ARE MANUFACTURED FOR USE IN RESEARCH IN CHEMICAL MANUFAC-TURING LABORATORIES ONLY AND ARE NOT INTENDED FOR USE IN CLINICAL OR DIAGNOSTIC APPLICA-TIONS. THE HAISPEED IO AND HAI-SPEED20 CARTRIDGE HOLDERS ARE RATED FOR USE UP TO 3.000 PSI (200BAR) WITH FLUIDS THAT ARE LIQ-UID AT STP (STANDARD TEMPERATURE AND PRESSURE) ONLY. SERIOUS BODI-LY INJURY OR DEATH MAY RESULT IF A HAISPEED HOLDER BROKE WHILE WORKING WITH SUPERCRITICAL FLU-IDS.

DISCLAIMER

EXCEPT AS EXPRESSLY PROVIDED, ALL WARRANTIES, CONDITIONS, REPRESENTATIONS, INDEMNITIES AND GUARANTEES, WHETHER EXPRESS OR IMPLIED, ARISING BY LAW, CUSTOM, PRIOR ORAL OR WRITTEN STATEMENTS BY HIGGINS ANALYTICAL OR OTHERWISE (INCLUDING, BUT NOT LIMITED TO, ANY WARRANTY FOR MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE) ARE OVERRIDDEN, EXCLUDED AND DISCLAIMED.

EXCLUSIVE REMEDY

In the event a customer establishes a breach of the above warranty, customer's exclusive remedy against Higgins Analytical, and Higgins Analytical's sole liability, is, at its option, the replacement of the defective product or the refund of the purchase price therefor:

NO CONSEQUENTIAL DAMAGES

HIGGINS ANALYTICAL SHALL NOT BE RESPONSIBLE FOR ANY CONSEQUEN-TIAL, INDIRECT, SPECIAL, PUNITIVE OR INCIDENTAL DAMAGES, WHETHER FORESEEABLE OR UNFORESEEABLE, INCLUDING, BUT NOT LIMITED TO, CLAIMS FOR LOSS OF GOODWILL, PROFITS, USE OF MONEY OR USE OF PRODUCTS, STOPPAGE OF OTHER WORK OR IMPAIRMENT OF OTHER ASSETS, ARISING OUT OF BREACH OF EXPRESS OR IMPLIED WARRANTY, BREACH OF CONTRACT, MISREPRESEN-TATION, NEGLIGENCE, STRICT LIABILITY IN TORT OR OTHERWISE, EXCEPT ONLY IN THE CASE OF PERSONAL INJURY WHERE AND TO THE EXTENT THAT APPLICABLE LAW REQUIRES SUCH LIABILITY.

PATENTS AND TRADEMARKS

Kromasil is a trademark of Eka Nobel. NewGuard and MPLC are trademarks of Perkin-Elmer: PICOTAG is a trademark of Waters. CAPELLINI, CLIPEUS, HAISIL, HAICART, HAIFILTER, HAIPEEK, HAISPEED, HEAVY, TARGA $^{\rm R}$, PHALANX, PROTO, HAIGUARD, PICCOLO, SPRITE, and Ca π llary are trademarks of Higgins Analytical, Inc.

Higgins Analytical develops and manufactures a wide range of stainless steel and PEEK (polyetheretherketone) High Performance Liquid Chromatography (HPLC) columns and cartridges. These unique offerings address many needs of chromatographers desiring fast analysis times, efficient system and column protection, and chemical inertness.

Special application areas include LC/MS, combinatorial chemistry, column switching techniques, in-line filtration, and guard column requirements. Products are supplied and supported worldwide by a network of responsive distributors.

We are a quality-oriented chromatography company dedicated to providing performance products, expert support, and rapid delivery to research and quality control laboratories worldwide.
